CAREER OBJECTIVE

Aspiring AI & Generative AI Engineer with a strong foundation in Python, LLMs, embeddings, vector databases, and RAG pipelines. Seeking an internship to build scalable AI-powered applications, contribute to real-world GenAI projects, and grow through hands-on engineering experience.

EDUCATION

Acropolis Institute of Technology and Research

B.Tech – Computer Science and Engineering | CGPA: 6.68

Indore, M.P.

Nov 2023 – Jun 2027

New Eklavya English H.S. School

Class XII | M.P. Board, Bhopal | Percentage: 88.4%

Suvasra, Mandsaur, M.P.

2023

Suraj Convent H.S. School

Class X | M.P. Board, Bhopal | Percentage: 90%

Rajod, Dhar, M.P.

2021

PROJECTS

IntelliDocs-RAG | Python, LangChain, FAISS, OpenAI API, FastAPI | Code

Ongoing

- Built an end-to-end RAG pipeline allowing users to upload documents and query them in natural language with high contextual accuracy.
- Implemented semantic chunking and embedding generation using OpenAI's `text-embedding-ada-002`, storing vectors in FAISS for sub-second similarity search.
- Designed a FastAPI backend with REST endpoints for document ingestion and QA, reducing query response time by over 40% vs full-document LLM prompting.
- Integrated LangChain's `RetrievalQA` chain with a sliding context window, improving answer relevance and eliminating hallucinations on out-of-context queries.

DocuChat-RAG | Python, LangChain, ChromaDB, HuggingFace, Streamlit | Code

Ongoing

- Developed a PDF-based conversational chatbot using RAG architecture, enabling users to get accurate, source-cited answers via a Streamlit interface.
- Used HuggingFace `sentence-transformers` for dense vector embeddings, persisted in ChromaDB with cosine similarity search for fast retrieval.
- Implemented multi-turn memory using LangChain's `ConversationBufferMemory`, maintaining context across follow-up questions seamlessly.
- Deployed on Hugging Face Spaces with Docker, supporting documents up to 100 pages with consistent low-latency cold-start performance.

TECHNICAL SKILLS

Programming Languages: C, C++, Python

Web Technologies: HTML, CSS

AI/ML & GenAI: LLMs, RAG, Embeddings, Vector Databases, LangChain, FAISS, ChromaDB

Databases: MySQL

Developer Tools & Platforms: Git, GitHub, Streamlit, FastAPI, Docker

ACHIEVEMENTS

Copyright Holder of "Copyright Issues in Generative AI" – registered intellectual property.

STRENGTHS

Quick learner with strong adaptability to new and emerging technologies; able to independently explore and implement AI tools with minimal guidance.

HOBBIES & INTERESTS

Gaming | Listening to Music
